In this case, it was intended to try how far the ovarian cyst might be gradually contracted, by drawing off small quantities of the fluid by successive operations: however, considerable inflammation succeeded the first attempt, and she had suffered a great deal from pain and tenderness of the abdomen ever since: an abscess had formed in the parietes, extending downwards towards the pubes. For some days before death, constant sickness, and frequent wandering and delirium, had marked the progress of the disease. SECTIO CADAVERIS.--O11 opening the abdomen, it was found that the parietes adhered closely over the whole lower part of the abdomen, to the omentum, which was spread out over. the cyst. The adhesion was so strong, that it was necessary to tear it away in every part; and the omentum and the peritoneal lining of...
